

# **Air New Zealand Christchurch Koru Lounge Multifleck Wall Coatings**

**Special Finishes Multifleck has been successfully installed to the new Koru Lounge at Air New Zealand in Christchurch with stunning results.**

**The result is a multi-layered textured coating in Air New Zealand's specifically designed corporate colour which offers a cost effective and more durable alternative to wall paper used for feature walls.**

**BRINGING TECHNOLOGY TO THE SURFACE**

New Zealand's foremost specialist coating group Special Finishes has installed Multifleck Wall Coating System to Air New Zealand's new Koru Lounge in Christchurch.

Multifleck was chosen for this particular installation based on the excellent work that had been done with Multifleck in Airports, Hotels and other public space facilities for many years, providing clients with an extremely durable and aesthetically pleasing wall coating.

Multifleck offers clients like Air New Zealand an *environmentally friendly alternative* to high VOC systems such as solvent based polyurethanes and paint systems. "Our clients are becoming very conscious of the effects various elements of their building may have on the environment, including the use of Volatile Organic Compounds (VOC's) and their impact on the environment.

Working on operating malls, Airports, Hospitals and Hotels demands the use of solvent free, low odour systems to lessen the impact on clients to the facility" says Barry McGee, National Sales Manager Special Finishes NZ Ltd.

The Multifleck Wall Coating System has been certified by Germanischer Lloyd, & CSIRO to IMO Resolution A.653 (16) relating to Fire Test procedures for Surface Flammability of Bulkheads, Ceilings and Deck Finishes for Marine Crafts.

Multifleck not only complies to these code requirements, but has been used successfully by some of the world's largest ship builders and manufacturers in conjunction with our other coating systems such as Thermal Coat which reduces noise and condensation issues.

**In addition to providing an aesthetically pleasing seamless wall coating, Multifleck has also been rated with a Lloyds IMO Certification with respect to smoke & flammability, which is extremely rare for decorative coating systems.**

One of the major advantages of Multifleck in this type of application is that it has the ability to transform walls with finishing that would struggle to pass as acceptable for standard paint systems, as it is 3 dimensional and textured.

Another major advantage of Multifleck is the ability to be installed on a completed project quickly and efficiently. Being spray applied, the location was masked off and then sprayed within a two day period just before opening.

Multifleck has been installed internationally for over 25 years with excellent results, transforming environments internally and externally. The Multifleck system is available in over 5000 different colour combinations, and specific corporate colour blends can be exclusively developed if required, as has also been the case for Vector.
